

The Complete Marine Asset Protection Solution

**Data Analysis and
Consultancy Services**

We strive to support maritime innovation that leads to safer, cleaner, and more efficient use of our global marine resources

For all of your big ideas, we can provide the structure to help them come to life

Consultancy and Analytics

General and/or targeted consulting backed by thorough data analysis.

What can we do for you

- Undertake Cable Burial Risk Assessment to optimise depth of burial for your asset.
- Take part in Cable Route Planning to mitigate risk by avoiding high-traffic and sensitive areas when possible.
- Undertake geological and hydrological survey work to inform route-planning analysis.
- Use our archive of global AIS data to make predictions on current and future trends in vessel traffic and regional fishing patterns.
- Utilise public and private datasets to analyse and plan for climate mitigation measures.
- Conduct offshore site investigations and regular

surveys to catch and address issues before they develop.

Key Services

- Cable Burial Risk Assessment (CBRA)
- GIS/Data Analysis
- Desktop Studies
- Cable Route Planning
- Environmental Impact Assessment (EIA)
- Climate Adaptation and Resilience Planning

Our global outlook

50,000km

of assets monitored globally

5,000+

hours of marine liaison services provided

80%

of offshore wind farm claims are cable related
